Module: 2 (HTML)

***Q.1* – Define the term: Website, Webpage, Web browser, Web server, HTML, CSS.**

ANS.

1. **Website: A collection of related web pages under a domain.**
2. **Webpage: A single document displayed in a browser.**
3. **Web Browser: Software to access websites (e.g., Chrome, Firefox).**
4. **Web Server: A computer that hosts websites and delivers to browsers.**
5. **HTML (Hyper Text Mark-up Language): Standard language for structuring web pages.**
6. **CSS (Cascading Style Sheets): Stylesheet language used to design and formal HTML pages.**

Q.2 – In how many ways can a CSS be integrated as a web page?

ANS. CSS can be integrated into a webpage in three main ways:

1. **Inline CSS:**
   - **Written directly inside the HTML element using the style attribute.**

     Example:

     ```
     <p style="color:blue; font-size:18px;">This is inline CSS</p>
     ```
2. **Internal CSS:**
   - **Defined inside a <style> tag within the <head> section of the HTML file.**

     Example:

     ```
     <!DOCTYPE html>
     <html>
     <head>
     <style>
       p {colour: green; font-size: 20px;}
     </style>
     </head>
     <body>
     ```

```
    <p>This is internal CSS</p>
</body>
</html>
```

3. **External CSS:**
   - **Stored in a separate .css file and linked using the <link> tag.**

     Example: (html file)

```
 < --index.html -->
<!DOCTYPE html>
<html>
<head>
    <link rel="stylesheet" type="text/css" href="style.css">
</head>
<body>
    <p>This is external CSS</p>
</body>
</html>
```

     (css file):

```
/* style.css */
p {
    color: red;
    font-size: 22px;
}
```
